

THE AGENTIC ERA OF REVENUE MANAGEMENT

Launching the Agentic Era of Revenue Management

90-day GTM plan for BEONx: category positioning, launch phases, revenue metrics, channel strategy and risks.

Executive summary

BEONx is not launching a cosmetic AI message. It is launching a sharper operating model for hotel revenue teams: from dashboard-led revenue management to supervised autonomous execution. The launch should make BEONx feel like the company defining the agentic category before competitors reduce it to another AI feature claim.

Core claim: BEONx is the agentic revenue platform for hotels - moving revenue management from dashboards and recommendations to supervised AI agents that monitor, forecast, propose, execute and report, with humans always in control.

Launch principle: make the category bold, make the use cases concrete, and make the control model reassuring.

1. Quantified objectives

Targets below are proposed launch targets to be calibrated against current BEONx baselines, ACV, funnel conversion and sales capacity.

Awareness	500k launch impressions; +35% LinkedIn follower growth; 5-8 earned media / podcast / industry mentions.	Make BEONx visible as the first serious agentic revenue platform in hospitality.
Demand	300-500 landing page conversions; 20-30 demo requests; 100+ downloads from target roles.	Turn the launch from announcement into identifiable demand.
Pipeline	EUR 500k-EUR 1M marketing-influenced pipeline, subject to ACV/baseline; 3-5 opportunity accelerations.	Tie the campaign to revenue, not vanity metrics.
Organic	Index and support terms: agentic revenue management, AI revenue management for hotels, hotel revenue AI agents.	Own the category language early.

2. Positioning

Category	Agentic Revenue Platform
Positioning statement	BEONx is the agentic revenue platform for hotels - moving revenue management from dashboards and recommendations to supervised autonomous execution.
For	Revenue managers, commercial directors, hotel owners/GMs and CFOs who need faster, more trusted revenue decisions with less manual work.
Not for	Hotels looking for a passive reporting dashboard, AI theatre, or a black-box system with no operational accountability.
Campaign line	From dashboards to action.

Control line	Autonomous where it helps. Human where it matters.
--------------	--

3. Message pillars

From dashboards to action	Traditional RMS helped teams see the work. BEONx agents help them do the work.	Simple contrast that explains the shift in seconds.
Supervised autonomy	Agents operate inside human-defined strategy, rules, thresholds and approvals.	Protects against buyer fear and black-box skepticism.
Revenue teams get leverage	The goal is not replacing revenue managers; it is removing repetitive work.	Elevates the buyer instead of threatening them.
Built for hotel operations	Agents map to real workflows: market monitoring, forecasting, pricing, reporting and strategy.	Avoids generic AI positioning.
Category leadership	This is an operating-model shift, not a feature update.	Gives BEONx a bigger story than the incumbent RMS frame.

4. Audiences and priority markets

Revenue Manager / Director of Revenue	Too much manual monitoring, reporting and decision prep.	Less dashboard work. More strategic control.
Commercial Director	Needs faster alignment across pricing, demand, channels and property teams.	A revenue operating layer that turns signal into action.
Owner / GM	Wants clarity, performance and confidence without deep RMS complexity.	Clearer decisions, better reporting, less operational drag.
CFO	Needs measurable return, risk control and operational efficiency.	Supervised automation tied to revenue discipline and margin protection.

Market approach: launch globally, activate locally. Lead with Spain/Southern Europe for credibility and base strength; prioritise UK/DACH for hospitality-tech sophistication; use North America selectively for category ambition and proof of global scale.

5. 90-day phasing

|--|--|--|--|

Pre-launch: build tension	Weeks 1-3	Teaser narrative; executive posts; sales enablement; internal alignment; proof validation; partner preview.	Market understands the problem before the announcement.
Launch week: claim the category	Week 4	Landing page, video, press release, executive posts, database email, SDR sequence, partner amplification.	BEONx owns the words: agentic revenue platform.
Sustain: turn attention into demand	Weeks 5-12	Meet-the-agents content, webinar, event talk track, customer proof, retargeting, SEO articles, nurture.	Campaign becomes pipeline and category memory.

6. Channel strategy under low budget

Owned: website, email, blog	Control the category definition and conversion path.	Highest leverage when budget is limited.
LinkedIn: company + executives	Make the narrative travel through credible people, not only brand posts.	Hospitality-tech buyers are active and referral-driven.
Earned: trade press, podcasts, communities	Frame BEONx as category leader, not feature follower.	Adds credibility that paid cannot buy cheaply.
Partners	Co-market with hotel-tech partners and consultants.	Borrow trust and reach.
Sales/product	Demo narrative, objection handling, outbound sequences.	Marketing must change sales conversations, not just website copy.
Paid	Small LinkedIn tests + retargeting to ICP roles and site visitors.	Use spend surgically to amplify proven messages.

7. Risks and mitigation

AI hype skepticism	Show concrete agent workflows, not vague claims. Use operational language and validated proof only.
Revenue managers fear replacement	Lead with supervised autonomy and strategic elevation: agents remove repetitive work, not human judgment.
Category claim outpaces proof	Position as vision + product evolution. Separate validated proof from placeholders. Avoid unsupported performance claims.
