

THE AGENTIC ERA OF REVENUE MANAGEMENT

BEONx Agentic Brandbook

Logo evolution, colour system, voice, applications and design rationale for the agentic platform launch.

Prepared by Heydar Naghiyev - AI-first launch sprint

1. Brand evolution: from AI-driven RMS to agentic platform

The brand evolution should not make BEONx look like a different company overnight. The role of the identity is to preserve trust while signalling a meaningful shift: BEONx is moving from recommendation software into supervised autonomous execution.

Design principle: evolve the existing brand equity. Do not paste an AI icon onto it.

2. The Agentic X

The existing BEONx name already contains the strongest symbol for the new category: the x. In the evolved mark, the x becomes the place where market signal, commercial strategy and autonomous execution meet.

BEON wordmark	Continuity, trust, hotel-operator credibility and human commercial judgment.
Teal diagonal	Signal: demand shifts, booking pace, competitor movement, forecast changes.
Magenta diagonal	Action: pricing, reporting, recommendations and execution.
Orange node	Human supervision: the checkpoint where autonomy remains accountable.

The result is not “AI added to the logo.” It is BEONx becoming more itself.

3. Logo system

The logo system has four practical variants.

Primary horizontal logo	Website header, launch deck, PDFs, email signature.
Reversed logo	Dark backgrounds, video end card, LinkedIn banners.
Monochrome logo	Admin/legal/small placements where colour is not reliable.
Icon-only Agentic X	Favicon, social avatar, motion transition, slide marker.

Primary logo prototype shown above. Final production would refine kerning and export SVG, PNG and EPS packages.

4. Construction and spacing

Clear space	Minimum clear space equals the height of the agentic x on all sides.
Digital minimum	Primary logo: 120 px wide. Icon-only: 24 px. Campaign lockup: 180 px.
Print minimum	Primary logo: 35 mm wide. Icon-only: 8 mm.
Small-size behavior	Use monochrome or simplified icon when the coloured x loses detail.

5. Incorrect usage

- Do not add robot, chip, brain, sparkle or generic AI icons.
- Do not stretch, rotate, outline or shadow the mark.
- Do not place the logo on busy hotel photography without a dark overlay.
- Do not make magenta and orange dominant over teal.
- Do not use the Agentic X as random decoration until it loses meaning.
- Do not imply unsupervised automation where the product story requires human oversight.

6. Colour system

Slate	#425563 / 66,85,99	Trust, structure, enterprise tone, typography.
Teal	#5BC1B6 / 91,193,182	Intelligence layer, agentic system, positive signal, UI highlights.
Magenta	#E50695 / 229,6,149	Signal alerts, launch moments, active path.
Orange	#FF9E18 / 255,158,24	Opportunity, action, CTA accents, human checkpoint.
Deep Slate	#15242B	Premium dark canvas for hero, video and executive assets.
Cloud / Mist	#F6F8F8 / #DDF5F2	Readable neutral space for enterprise calm.

7. Typography

Current BEONx typography is retained. In this prototype, system sans typography approximates the intended hierarchy: large confident headlines, restrained body copy and tight editorial labels. The important shift is not typeface novelty; it is messaging discipline.

Headlines	Short, direct, high contrast. No “future of” clichés unless supported by detail.
Body	Operational and buyer-specific. Explain what changes in the workflow.

Labels	Use small uppercase labels for system modules: Market Watch, Forecast, Pricing, Reporting.
--------	--

8. Voice and tone

Voice principle: Calm intelligence. Confident execution. No AI theatre.

Explain what the agents actually do.	Hide behind vague AI language.
Speak to commercial outcomes.	Sell AI as magic.
Keep humans in control.	Suggest revenue managers are obsolete.
Use operational language.	Overuse “revolutionary”, “unlock”, “future”.
Show proof and workflow.	Make sci-fi promises.

9. Imagery and iconography

Premium hospitality realism	Hotels, revenue teams, commercial environments, meeting rooms, dashboards in context.
UI-inspired signal graphics	Booking curves, rate movements, approval checkpoints, forecast ranges.
Agent modules	Simple card system: Market Watch, Forecast, Pricing, Reporting, Strategy.
Avoid	Robots, glowing brains, neon circuitry, random holograms, unrealistic hotel futurism.

10. Application: LinkedIn launch post

Visual: dark slate background, Agentic X in motion path, headline: “From dashboards to action.”

Copy:

The dashboard era helped revenue teams see more. The agentic era will help them do more. Today, BEONx introduces its vision for the agentic revenue platform for hotels: supervised AI agents that monitor, forecast, propose, execute and report - with humans always in control.

11. Application: email signature

Name	Heydar Naghiyev
Title	Marketing Director - Growth & Brand Lead

Campaign line	BEONx - The Agentic Revenue Platform for Hotels
CTA	Explore the agentic era of revenue management

12. Application: deck title slide

Use deep slate background, reversed logo, large title and one supporting line. Keep the page almost empty. The point is confidence, not decoration.

Title: The Agentic Era of Revenue Management

Subtitle: From dashboards and recommendations to supervised autonomous execution.

13. Application: website hero

Headline: The Agentic Revenue Platform for Hotels

Subhead: BEONx moves revenue management from dashboards and recommendations to supervised AI agents that monitor, forecast, act and report.

CTA: Book a demo / Meet the agents

This hero is designed to land the new positioning in under five seconds while avoiding unsupported performance claims.
