

THE AGENTIC ERA OF REVENUE MANAGEMENT

Communications Plan

Narrative arc, audience messaging, channel plan and drafted launch content for BEONx agentic positioning.

1. Communications strategy

The launch should not sound like BEONx discovered AI last week. It should sound like BEONx is connecting its existing RMS, forecasting, pricing and reporting capabilities into the next operating model for hotel revenue management.

Narrative job: define the category before competitors define it badly.

2. Narrative arc

1. Dashboard era limit	Revenue teams are not short of data. They are short of time.	Executive post, email, blog opener
2. Agentic revenue management explained	Agents move work from insight to action, inside human-defined rules.	Launch page, explainer article, webinar
3. Meet the agents	Make the use cases tangible: Market Watch, Forecast, Pricing, Reporting, Strategy.	LinkedIn carousel, short video, product page modules
4. Human-supervised by design	Address trust, control and adoption head-on.	Customer email, sales deck, FAQ
5. New role of the revenue manager	Revenue managers become commercial pilots, not spreadsheet operators.	Thought leadership, event talk track

3. Audience messaging matrix

Prospects	Too much manual work	BEONx agents reduce the operational load between insight and action.
Existing customers	Is this a risky pivot?	BEONx is evolving the workflows they already trust.
Revenue managers	Will AI replace me?	Agents remove repetitive work so revenue managers can focus on strategy.
GMs / owners	Will this improve performance?	Better revenue workflows with clearer reporting and control.
CFOs	Is this measurable?	Lower manual effort, better discipline and faster revenue decisioning.

4. Channel plan

LinkedIn company	Anchor the public category claim.	Launch post, video, agent carousel, proof posts.
Executives	Humanise the POV and show strategic conviction.	Founder/CRO posts, category POV, customer-facing reflections.
Email	Convert known audience into visits, demos and sales conversations.	Announcement email, existing customer email, nurture sequence.
Partners	Borrow trust and reach.	Co-marketing notes, partner posts, webinar invites.
Events	Turn the launch into a talk track.	Keynote angle: the agentic era of revenue management.

5. Content example: company LinkedIn post

The dashboard era helped revenue teams see more. The agentic era will help them do more.

Today, BEONx introduces its vision for the agentic revenue platform for hotels.

Not another dashboard. Not another AI layer that produces more things to review.

A supervised layer of AI agents built to monitor market movement, update forecasts, propose pricing actions, execute within approved rules, and turn performance into clear reporting.

Revenue teams stay in control. The repetitive work stops taking the wheel.

The agentic era of revenue management starts now.

6. Content example: executive LinkedIn post

For years, hotel revenue management has been built around one assumption:

Software recommends. Humans execute.

That model helped the industry move forward. But it also created a new bottleneck: revenue teams drowning in dashboards, reports, rate checks and manual workflows.

At BEONx, we believe the next chapter is different.

AI agents will not replace revenue managers. They will remove the repetitive work that stops great revenue managers from being strategic.

That is why BEONx is evolving from an AI-driven RMS into an agentic revenue platform.

Autonomous where it helps. Human where it matters.

7. Press release draft

BEONx Introduces Its Vision for the Agentic Revenue Platform for Hotels

Madrid, Spain - [DATE] - BEONx, a hospitality technology company providing AI-driven revenue management software to hotels globally, today introduced its new vision for agentic revenue management: a supervised layer of AI agents designed to help hotel revenue teams move from dashboard-led decision-making to autonomous revenue operations.

The new positioning reflects BEONx's evolution from AI-driven recommendations toward agents that can monitor market movement, support forecasting, propose pricing actions, execute within approved rules, and turn performance into clear commercial reporting.

"Revenue teams are not short of data. They are short of time," said [EXECUTIVE NAME], [TITLE] at BEONx. "The agentic era is about giving those teams leverage while keeping human strategy and control at the centre."

BEONx currently serves 2,000+ properties across 30+ countries. The company will introduce its agentic platform vision across website, customer communications, partner channels and industry events over the coming quarter.

About BEONx

BEONx provides AI-driven revenue management technology for hotels, resorts and groups. The company helps revenue teams improve decision-making, pricing workflows and commercial performance through data, forecasting and automation.

8. Thought-leadership outline

Title: Revenue Management Does Not Need Another Dashboard

Thesis: The next competitive advantage in hotel revenue management is not more visibility. It is reducing the manual work between signal and action.

Sections: 1) The visibility era solved one problem and created another. 2) Why revenue teams are drowning in operational work. 3) What agentic revenue management means in practical terms. 4) Why autonomy must remain supervised. 5) The new role of revenue managers: commercial pilots, not dashboard operators.
