

THE AGENTIC ERA OF REVENUE MANAGEMENT

Promotional Video Storyboard

A premium no-TTS video route: motion typography, caption-led narrative and optional human voiceover script.

Video decision

The first text-to-speech route was rejected because it made the asset feel less premium. This version is designed as motion typography with captions and optional human-recorded voiceover. The MP4 prototype is intentionally voice-free: it demonstrates story, pacing, visual system and message without relying on a robotic synthetic voice.

Storyboard: From Dashboards to Action

0-5s	Dark slate, signal lines move across screen.	Revenue management has changed.
5-12s	Dashboard overload: multiple cards, signals, alerts.	More data. More dashboards. More decisions.
12-20s	Agentic X mark animates as paths converge.	Introducing the agentic revenue platform for hotels.
20-32s	Five agent cards appear one by one.	Monitor. Forecast. Price. Report. Explain.
32-42s	Human checkpoint / approval layer.	Autonomous where it helps. Human where it matters.
42-52s	Clean logo end card.	Less dashboard work. More commercial strategy.

Optional human voiceover script

For years, revenue management software helped hotels see what was happening. More data. More dashboards. More decisions. But hotel teams are not short of data. They are short of time. BEONx is introducing the agentic revenue platform for hotels: supervised AI agents that monitor the market, build forecasts, propose and execute pricing actions, and turn performance into clear commercial reporting. Autonomous where it helps. Human where it matters. Less time managing dashboards. More time managing strategy. BEONx. The agentic era of revenue management starts now.
