

# Launching the Agentic Era of Revenue Management

## 90-day GTM plan for BEONx

Prepared by Heydar Naghiyev | Marketing Director Case Study | BEONx

Strategic spine: BEONx moves hotel revenue management from dashboards and recommendations to supervised autonomous execution.

## Executive summary

BEONx has an opportunity to move from being understood as an AI-driven Revenue Management System into a sharper category position: the agentic revenue platform for hotels. This launch should make the market feel that BEONx is not announcing an AI feature. It is defining the next operating model for hotel revenue management.

**Core claim: BEONx moves revenue management from dashboards and recommendations to supervised autonomous execution.**

## Objectives - 90 day proposed targets

| Area             | Target                                                                                                      | Commercial meaning                                    |
|------------------|-------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|
| Awareness        | 500k launch impressions; +35% LinkedIn follower growth; 5-8 earned-media/partner mentions                   | Establish category language before incumbents own it  |
| Demand           | 300-500 landing-page conversions; 20-30 demo requests; 100+ content downloads from target roles             | Turn narrative into measurable buying intent          |
| Pipeline         | EUR 500k-EUR 1M marketing-influenced pipeline, calibrated to ACV and baseline                               | Tie launch to revenue rather than applause            |
| Organic          | Index launch page for agentic revenue management, AI revenue management for hotels, hotel revenue AI agents | Create a durable search asset around the new category |
| Sales enablement | 1 narrative deck, 1 objection guide, 3 outbound sequences                                                   | Make the launch usable by revenue teams               |

## Positioning

| Element               | Recommendation                                                                                                                                                                   |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Category              | Agentic Revenue Platform                                                                                                                                                         |
| Positioning statement | BEONx is the agentic revenue platform for hotels - moving revenue management from dashboards and recommendations to supervised AI agents that monitor, forecast, act and report. |
| Campaign title        | The Agentic Era of Revenue Management                                                                                                                                            |
| Campaign line         | From dashboards to action.                                                                                                                                                       |
| Control promise       | Autonomous where it helps. Human where it matters.                                                                                                                               |
| Who it is for         | Revenue managers, commercial directors, GMs, owners and CFOs who need faster, trusted revenue decisions with less manual work.                                                   |
| Who it is not for     | Hotels looking for a passive reporting dashboard, AI theatre, or automation without operational adoption.                                                                        |

## Message pillars

| Pillar                          | Market meaning                                                                           |
|---------------------------------|------------------------------------------------------------------------------------------|
| From dashboards to action       | Traditional RMS helped teams see the work. BEONx agents help teams do the work.          |
| Supervised autonomy             | Agents operate inside human-defined strategy, constraints and approval thresholds.       |
| Revenue teams get leverage      | The goal is not to replace revenue managers. It is to remove repetitive work.            |
| Built for real hotel operations | Agents map to market monitoring, forecasting, pricing, reporting and strategy workflows. |
| Category leadership             | BEONx is not announcing a feature. It is defining a new operating model.                 |

## Priority audiences and markets

| Audience                              | Need                                              | Message                                                                                          |
|---------------------------------------|---------------------------------------------------|--------------------------------------------------------------------------------------------------|
| Revenue Manager / Director of Revenue | Less manual work and better trust                 | Agents reduce repetitive monitoring, checks and reporting while keeping strategy in human hands. |
| Commercial Director / GM              | Faster decisions and clearer control              | BEONx connects revenue signals to action and reporting.                                          |
| Owner / CFO                           | Profitability, efficiency and risk control        | Supervised automation creates discipline, transparency and operational leverage.                 |
| Existing customers                    | Confidence that this is evolution, not disruption | BEONx is making trusted workflows more agentic, not asking teams to start from zero.             |

Lead with Spain/Southern Europe for credibility and proximity, then activate UK/DACH and North America as expansion markets. The principle: launch globally, activate locally.

## Phasing

| Phase               | Timing     | Objective                                | Key moves                                                                                                          |
|---------------------|------------|------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| Pre-launch          | Weeks 1-3  | Create tension and prepare revenue teams | Teaser posts; executive POV; sales narrative; partner preview; proof validation; landing page final QA             |
| Launch week         | Week 4     | Make the category claim                  | Landing page; launch video; press release; executive posts; email to database; SDR sequence; partner amplification |
| Post-launch sustain | Weeks 5-12 | Turn attention into demand and pipeline  | Meet the agents series; webinar; customer proof; SEO content; targeted LinkedIn; nurture; events talk track        |

## Channel strategy with low budget

| Channel            | Role                              | Priority tactics                                                                  |
|--------------------|-----------------------------------|-----------------------------------------------------------------------------------|
| Owned              | Category home and conversion path | Launch page, blog/guide, email, HubSpot nurture, sales enablement                 |
| Executive LinkedIn | Credibility and reach             | CEO/CRO launch posts, revenue-management POV, short video clips                   |
| Earned             | External validation               | Hospitality tech press, podcasts, partner newsletters, event speaking submissions |
| Paid               | Precision, not volume             | Small LinkedIn test against revenue/commercial leadership; retarget page visitors |
| Partners/events    | Borrowed trust                    | Co-marketing with hotel tech partners and industry voices                         |
| Product/sales      | Adoption and conversion           | Demo story, objection handling, agent use-case cards                              |

## Risks and mitigation

| Risk                         | Why it matters                                       | Mitigation                                                                                          |
|------------------------------|------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| AI hype scepticism           | The audience is sophisticated and tired of buzzwords | Show real workflows, named agents, human supervision and validated proof.                           |
| Fear of replacement          | Revenue managers may hear autonomy as threat         | Frame agents as leverage: repetitive work moves to agents, strategy remains human.                  |
| Category claim outruns proof | A bold claim without evidence weakens trust          | Use proof from current capabilities, label placeholders, validate outcomes before external release. |

## What I would do with two more weeks

Interview 3-5 customers, validate the agent names and proof points with product, run a sales workshop, build HubSpot scoring/nurture, create the full sales deck and objection guide, test 3 LinkedIn creative routes, and turn the AI workflow into a reusable launch production system.
