

BEONx Agentic Revenue Platform

Brand evolution and logo system

Prepared by Heydar Naghiyev | Marketing Director Case Study | BEONx

Strategic spine: BEONx moves hotel revenue management from dashboards and recommendations to supervised autonomous execution.

Brand evolution principle

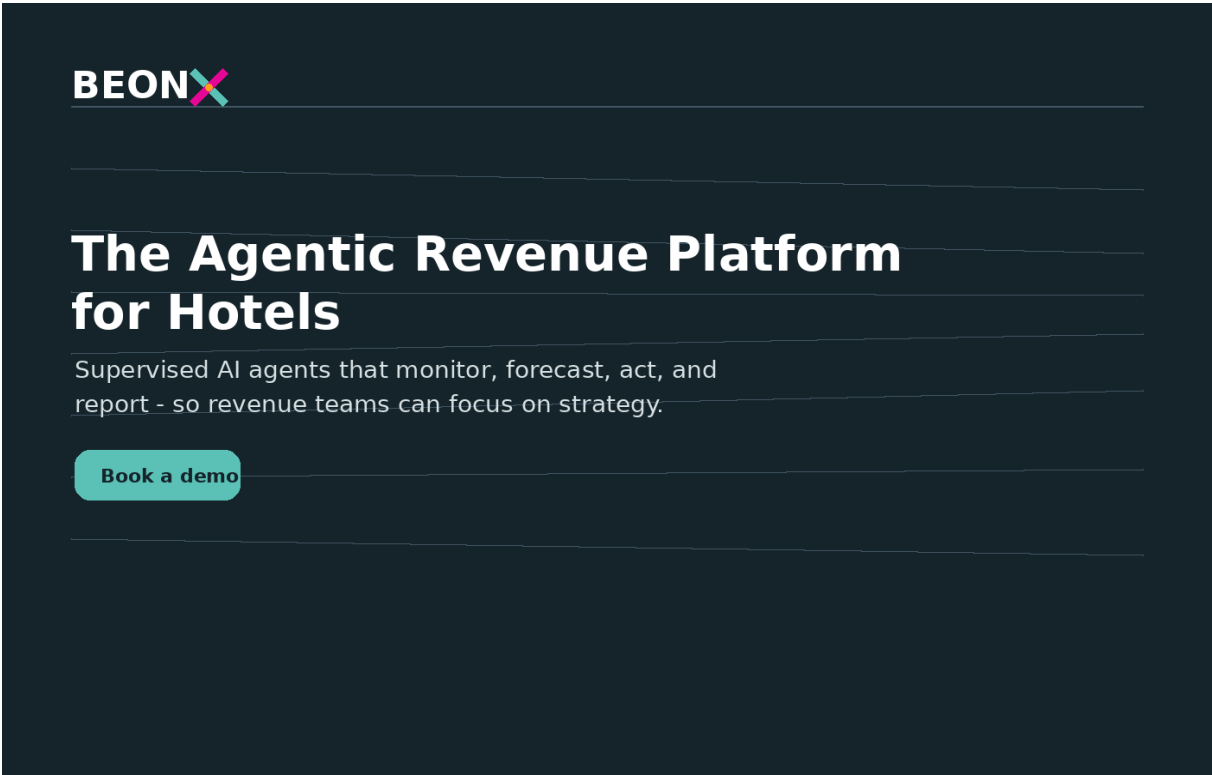

This is not a rebrand. It is a meaningful evolution from AI-driven RMS to agentic revenue platform. The system keeps BEONx trust and recognition while making the x carry the new story of signal, decision and supervised action.

Design principle: do not add an obvious AI icon. Make the existing x become the agentic action mark.

Logo concept - The Agentic X

The existing BEONx name already contains the symbol of the new era: x. In the evolved mark, the x becomes the point where market signal, commercial strategy and autonomous execution meet. One diagonal represents signal - demand, pace, competitor movement, forecast changes. The other represents action - pricing, reporting, recommendations and execution. The central node represents human supervision: the point where autonomy remains accountable.

The result is not AI added to the logo. It is BEONx becoming more itself.

Logo system

Version	Use	Notes
Primary horizontal logo	Website header, decks, documents, sales assets	BEON in Slate; active x in Teal/Magenta with Orange node
Reversed logo	Dark backgrounds, video end card, hero sections	White wordmark with coloured x for contrast
Monochrome logo	Legal/admin documents, low-colour contexts	All Slate or all White
Icon-only mark	Favicon, social avatar, transitions, app tile	The Agentic X acts as the campaign symbol

Clear space and minimum sizes

Rule	Specification
Clear space	Minimum clear space equals the height of the agentic x on all sides.
Digital primary logo	120px width minimum.
Digital icon-only mark	24px minimum.
Print primary logo	35mm width minimum.
Print icon-only mark	8mm minimum.

Incorrect usage

Do not add robot, chip, brain, sparkle or generic AI icons. Do not stretch, rotate, outline or shadow the wordmark. Do not place the logo on busy hotel photography without a dark overlay. Do not make Magenta or Orange dominant over Teal. Do not use the x as random decoration until it loses meaning.

Colour system

Colour	HEX	RGB	Role
Teal	#5BC1B6	91, 193, 182	Intelligence layer, positive signal, agentic system
Slate	#425563	66, 85, 99	Trust, structure, enterprise tone
Magenta	#E50695	229, 6, 149	Signal alert, launch accent, active path
Orange	#FF9E18	255, 158, 24	Opportunity, action, human checkpoint
Deep Slate	#15242B	21, 36, 43	Premium dark background
Cloud	#F6F8F8	246, 248, 248	Neutral space and readability

Typography

Current typography should be retained. The launch system uses strong hierarchy: short headlines, generous whitespace, compact proof points and modular UI-style cards. If a web-safe prototype font is needed, Inter or system sans-serif is the closest executional substitute.

Voice and tone

Calm intelligence. Confident execution. No AI theatre.

We do	We do not
Explain what the agents actually do	Hide behind vague AI language
Speak to commercial outcomes	Sell AI as magic
Keep humans in control	Suggest revenue managers are obsolete
Use operational language	Overuse revolutionary, unlock or future
Show proof and workflow	Make sci-fi promises

Imagery and iconography

Photography should feel premium, operational and human: revenue teams, hotels, workspaces and commercial decision moments. Illustration should use signal lines, nodes, market movement and UI-like overlays. Avoid robots, glowing brains and neon circuitry. Icons should be simple line-based modules for Market Watch, Forecast, Pricing, Reporting and Strategy agents.

Applications

From dashboards to action.

BEONx introduces the agentic era of revenue management.
