

Communications Plan

Launching BEONx as the agentic revenue platform for hotels

Prepared by Heydar Naghiyev | Marketing Director Case Study | BEONx

Strategic spine: BEONx moves hotel revenue management from dashboards and recommendations to supervised autonomous execution.

Narrative arc

Chapter	Topic	Purpose
1	The dashboard era is reaching its limit	Create problem recognition without attacking existing RMS buyers.
2	Agentic revenue management, explained	Define the category before competitors define it badly.
3	Meet the agents	Make the agentic story tangible and operational.
4	Human-supervised by design	Address trust, control and replacement concerns.
5	The new revenue manager	Elevate the buyer from dashboard operator to commercial pilot.

Audience messaging matrix

Audience	Concern	Message
Prospects	Too much manual work	BEONx agents reduce the operational load between insight and action.
Existing customers	Is this a risky pivot?	BEONx is evolving workflows they already trust.
Revenue managers	Will AI replace me?	Agents remove repetitive work so revenue managers can focus on strategy.
GMs / owners	Will this improve performance?	Faster revenue workflows with clearer reporting and control.
CFOs	Is this measurable?	Less manual effort, stronger discipline and better revenue decisioning.

Channel plan

Channel	What lives there	Why
Company LinkedIn	Launch announcement, agent cards, video cuts	Best channel for category education and social proof.

Executive LinkedIn	CEO/CRO POV posts, human-supervised AI narrative	Creates trust and point of view beyond product copy.
Email	Customer/prospect launch, demo CTA, agentic guide	Turns awareness into owned demand.
Partners	Co-marketing blurbs and newsletter mentions	Borrowed credibility and targeted reach.
Events	Talk track: from dashboards to action	Turns category into a stage-ready story.
PR	Launch announcement and thought leadership	Adds external validation.

Company LinkedIn post

The dashboard era helped revenue teams see more. The agentic era will help them do more.

Today, BEONx is introducing its new vision: the agentic revenue platform for hotels. Not another dashboard. Not another AI layer that produces more things to review. A supervised layer of AI agents built to monitor market movement, update forecasts, propose pricing actions, execute within approved rules, and turn performance into clear reporting. Revenue managers stay in control. The repetitive work stops taking the wheel. The agentic era of revenue management starts now.

Executive LinkedIn post

For years, hotel revenue management has been built around one assumption: software recommends, humans execute. That model helped the industry move forward. But it also created a new bottleneck: revenue teams drowning in dashboards, reports, rate checks and manual workflows. At BEONx, we believe the next chapter is different. AI agents will not replace revenue managers. They will remove the repetitive work that stops great revenue managers from being strategic. That is why we are evolving BEONx from an AI-driven RMS into an agentic revenue platform. Autonomous where it helps. Human where it matters.

Press release draft

Headline: BEONx Introduces the Agentic Revenue Platform for Hotels

Subhead: The company evolves beyond traditional revenue management software with supervised AI agents that monitor, forecast, propose actions, execute within approved rules and report on performance.

Opening: BEONx today announced its new positioning as the agentic revenue platform for hotels, marking a shift from dashboard-led revenue management to supervised autonomous execution. The new vision introduces AI agents designed to support revenue teams across market monitoring, forecasting, pricing, reporting and strategic decision workflows.

Quote draft: Revenue teams do not need more dashboards. They need more leverage. The agentic era is about giving hotels AI agents that can handle repetitive operational work while keeping commercial strategy firmly in human hands.

Thought leadership outline

Section	Angle
Title	The Dashboard Era Is Reaching Its Limit: What Agentic Revenue Management Means for Hotels
Thesis	The next leap is not better recommendations; it is supervised execution.
Part 1	Why revenue teams are overloaded with signals and manual workflow.
Part 2	What agentic systems do differently from traditional RMS.
Part 3	Why human supervision is the trust layer.
Part 4	How the role of revenue managers changes.
